

Qualifications

- BSc (Eng) Honours in Aeronautical & Aerospace Engineering

Skills

- Databricks
- Databricks Lakeflow
- ETL & CI/CD Pipelines
- SQL
- Python & PySpark
- Data Engineering
- Data Science
- Data Analytics (Databricks, Excel & Power BI)
- Data Migration
- Machine Learning
- Advanced LLM Utilisation
- Microsoft Suite (Excel, PowerPoint, Word)

Industry Exposure

- Aeronautical Engineering
- Telecommunications
- Agricultural

Summary of Professional Experience

Muaaz is an Analyst in the AI & Data consulting practice at Deloitte. He holds a BSc (Eng) Honours degree in Aeronautical and Aerospace Engineering from the University of Witwatersrand, with a strong technical foundation across multiple engineering disciplines, academic research, and technical design. His multidisciplinary background spans aeronautical, aerospace, mining, industrial, mechanical, and mechatronics engineering. Prior to joining consulting, Muaaz gained industry experience as an Aeronautical and Mechanical Engineer, where he was exposed to large-scale manufacturing, aircraft design, and engineering process improvement. He contributed to the design and development of light sport aircraft and supported initiatives to streamline aircraft component assembly processes, improving manufacturing efficiency.

At Deloitte, Muaaz has gained practical experience in the agricultural industry, supporting a large-scale data profiling and data migration project into SAP. His work involves preparing, transforming, validating, and aligning business-critical data to support migration requirements, enterprise data quality, and downstream BI reporting. He has also supported project delivery for a telecommunications company, involving automated data processing through CI/CD practices and machine learning pipelines.

Muaaz has developed strong practical experience in Databricks, particularly in building ETL pipelines using Databricks Lakeflow. He applies SQL and PySpark to perform data extraction, transformation, cleansing, validation, and enrichment. He is skilled in Python and SQL, with practical experience across Data Engineering, Analytics, and Data Science use cases. He also has a strong interest in Machine Learning and Artificial Intelligence and actively leverages Large Language Models and modern AI tools, including Microsoft Copilot, Google Gemini, Claude, and OpenAI, to support productivity, analysis, and technical problem-solving.

Combining his engineering background with practical experience across data engineering, analytics, data science, and machine learning, Muaaz is an adaptable and detail-oriented professional with a strong ability to learn quickly, solve complex problems, and deliver efficient, high-impact solutions across diverse technical environments.

Relevant Experience

- Agricultural Industry (Data Readiness and SAP Data Migration):** Supporting a large-scale data readiness and migration project for the agricultural industry, focused on preparing legacy data for migration into SAP. Built and maintained Databricks ETL pipelines using SQL and PySpark to extract, transform, cleanse, validate, and align data across multiple source systems.
- Telecommunications Industry (Machine Learning CI/CD Pipeline Integration):** Supported the delivery of an automated machine learning CI/CD pipeline for a telecommunications company using GitLab. Contributed to debugging and optimizing key pipeline stages, including data extraction, model development, and model training.
- Engineering Industry (Process Engineering and Operations Optimization):** Applied engineering design and process improvement experience within the engineering industry to optimize the manufacturing and assembly of light sport aircraft components. Streamlined production processes, contributing to a 35% reduction in manufacturing time and improved operational efficiency.
